

KRIS DATA DISTRIBUTION

TRANSPARENT AND AUTOMATED ENERGY COST BILLING

The KRIS data distribution system is a web-based solution for the transparent and automated distribution and billing of operating resources such as raw materials or energy. It enables the precise allocation of resource usage to tariffs and target cost centers—ideal for industrial sites, energy service providers, and companies with complex raw material and energy flows. Thanks to its close integration with the KRIS platform, all recorded operating data can be efficiently processed and visualized.

Digitized recording and billing of energy costs

Transparent energy cost billing

Customizable rates and structures

Error reduction and time savings

WHICH PROBLEM DOES THE KRIS DATA DISTRIBUTION SYSTEM SOLVE?

Raw material and energy costs are often difficult to track and allocate. Different tariffs, changing consumption data, and manual calculations often lead to errors and a lack of transparency. The KRIS billing system remedies this by using the consumption data automatically recorded in KRIS, assigning it correctly, and evaluating it clearly. Companies can thus bill costs precisely, increase their energy efficiency, and save time

HIGHLIGHTS OF KRIS DATA DISTRIBUTION

- Automated energy billing: Consumption data is transferred directly and billed based on rules
- Evaluation using tariffs: Measurement data can be flexibly converted into costs or environmental variables
- Flexible tariff structures: Tariff changes can be mapped over time
- Distribution to target structures: Consumption is distributed proportionally to buildings, projects, or cost centers
- Traceability: Changes, balancing, or distributions are recorded based on time and user
- Plausibility checks through automatic checks
- Error compensation for meter allocation: Measurement errors and losses can be compensated based on the generator data
- Seamless integration into KRIS apps

and resources.

The KRIS billing system thus offers a future-proof solution for accurate and transparent energy cost billing – ideal for anyone who wants to make their energy billing smarter.

JUST GET STARTED AND START SAVING RIGHT AWAY

With the KRIS data distribution system, you're getting a modern tool that not only meets current requirements but is also ready for future developments. Whether it's rising energy costs, new legal requirements, or sustainability goals, KRIS offers the flexibility and scalability you need.

The KRIS data distribution system is easy to implement and quick to set up. Our experienced team will support you in every step of the way, from setup to application, and tailor the system to your individual needs. After just a short time, you will benefit from clear billing, less effort, and a better basis for decision-making—without any high entry barriers. You not only get a powerful tool, but also personal support—for maximum impact.

With automated data transfer and personal support during software implementation, we are happy to assist you in replacing your legacy systems.

ADVANTAGES OF THE KRIS DATA DISTRIBUTION SYSTEM

- **Increased efficiency:** Automated processes reduce manual effort and minimize errors.
- **Transparency:** Data integration in KRIS Energy management and KRIS Reporting provides you with detailed reports and graphical analyses of your balanced data.
- **Flexibility:** Customizable distribution rules and tariff structures enable individual solutions for different billing scenarios.
- **Easy to use:** The intuitive, web-based user interface ensures easy operation.
- **Optimal basis for decision-making:** Well-founded analyses help companies identify energy-saving potential and reduce costs.
- **Automated knowledge transfer:** By defining standard methods for plausibility checks in energy accounting, valuable knowledge remains within the company.
